

Service Catalogue

Flex printing, sign boards, CNC & laser cutting, and stationery — printed and cut in-house in Jaipur.

Wide Format & Flex Printing

Flex Printing	The banner you reach for when someone asks what it's going to cost. Fast, wide-format, and the material behind most shop banners and event boards you see around Jaipur.
Banner Printing	Not sure which material you actually need? Tell us where it's going and what it's for, and we'll print it on whatever makes sense — not whatever's most expensive.
Business Cards	Make every introduction count with professionally designed Business Cards that reflect your brand identity and leave a memorable impression.
Backlit Printing	Film made to be lit from behind, not in front of — for light boxes, illuminated panels, and displays that need to glow evenly rather than just look bright.
Vinyl Printing	Self-adhesive graphics that stick to glass, walls, and vehicles — printed, cut, and applied so it looks painted on, not stuck on.
Brochures and flyers	At our core, we believe print media remains one of the most powerful touchpoints for marketing. A well-crafted brochure or flyer does more than just share information—it tells your brand story, builds credibility, and converts prospective leads into loyal clients.
Star Flex Printing	A heavier, glossier grade of flex for hoardings and long-run banners — for jobs where standard flex starts to look cheap after a month in the sun.
One Way Vision Printing	The perforated film on shop and car windows that shows a full image from outside but still lets you see out from inside.
Eco Solvent Printing	Not a material — a printing method. Lower-odour ink for indoor-friendly, high-detail work on vinyl, canvas, and photo panels.

Sign Boards & Illuminated Signage

LED Sign Board	The lighting upgrade behind almost every illuminated sign built today — brighter, cooler running, and lasting years longer than the fluorescent tube boxes it replaced.
Glow Sign Board	The classic storefront sign — an aluminium-framed box with a translucent face, lit evenly from inside, that's still the first thing most shop owners ask for.
Acrylic Sign Board	A flat acrylic panel sign — crisp edges and a premium finish, for businesses that want something sharper-looking than flex without necessarily going fully illuminated.
ACP Sign Board	Aluminium composite panel — light, rigid, and weatherproof at a scale flex and acrylic can't match. The material behind most large fascia and building-front signage.

CNC / Laser Cutting & Letters

Acrylic Letter	Individual letters cut clean from acrylic sheet — flat-cut for a simple wall logo, or backlit for the halo-glow look on office reception walls.
3D Letter Cutting	Raised, dimensional letters with real depth — acrylic, MDF, ACP, or stainless steel, mounted proud of the wall for a look flat vinyl can't fake.
MDF Letter Cutting	Wood-based letters for interior signage — a warmer, more affordable option than acrylic or metal when the sign isn't facing weather.

GoLineArt

CNC Router Cutting	The machine behind most of our flat-sheet signage — cutting acrylic, MDF, ACP, and foam board to precise shapes from a digital file.
Laser Cutting	Fine, intricate cuts with a naturally polished edge — best for detailed shapes and thinner materials that a router bit would tear or overheat.
Jaali Cutting	Decorative perforated screens — geometric or floral lattice patterns cut into MDF, acrylic, or ACP for partitions, facades, and stage backdrops.
Plotter Cutting	Blade-cut vinyl and paper — for sticker lettering, stencils, and heat-transfer designs. A different machine from CNC routing, built for thin flexible sheets, not rigid board.
CNC Engraving	Marking into a surface rather than cutting through it — for name plates, plaques, awards, and panels that need permanent, precise text or logos.
CNC Job Work	Bring your own design and material — we cut it. A straight job-work service for other workshops, designers, and businesses that need precision cutting without owning the machine.
Name Plate	The sign at your door — office designation plates and home name plates, engraved or printed, sized for a desk, a door, or a gate.

Event & Outdoor Branding

Event Printing	Everything one event needs — backdrops, entry gates, stage banners, and table branding — printed together so it actually looks like one event, not five separate orders.
Rollup Standee	A printed banner in a retractable stand — set it up in under a minute, pack it into a bag, and reuse it at the next event.
Birthday Printing	Name, age, and a favourite theme turned into banners, standees, and photo backdrops — party printing that's ready before the guests arrive.
Outdoor Advertising	Large-format hoardings, unipoles, and building wraps — outdoor ad installations at a scale beyond a single shop banner.

Offset & Stationery Printing

Brochure Printing	Multi-page and multi-fold print collateral — company profiles, product catalogues, and tri-folds designed to be picked up and actually read.
Offset Printing	Not a product, a process — the technology behind our large-quantity print runs, where cost per piece drops sharply the more you order.
Stationery Printing (Business Cards, Letterheads & More)	Business cards, letterheads, and envelopes — the paperwork that quietly represents your business every time someone hands it over.
Carry Bag Printing	Branded paper and non-woven bags — because the bag someone carries your product home in is still doing marketing after they've left the shop.
Pamphlet Printing	Single-sheet flyers for mass distribution — cheap per piece, quick to print, and built for handing out, not keeping.

This catalogue lists what we make — not pricing, which depends on size, material, and quantity for almost everything here. Get a quote at golineart.com/get-quote, or reach out directly for a straight answer on your specific job.
